NOTES:

1. Where existing pipes and fittings are present, they shall be sawcut along the springline to form the flow channel within the manhole. Manhole base sections shall be filled with concrete to a level equal to the springline of the exposed pipes, and shall be formed to drain into the flow channel toward the outlet pipe.

2. Where existing pipes and fittings are not present within the manhole, the flow channel shall be hand-formed to drain into the flow channel toward the outlet pipe. Manhole base sections shall be fitted with concrete to the approximate level of the top of the pipe.

3. Manhole base sections shall be filled with concrete to the approximate level of the top of the pipe. Water stops shall be installed per detail as shown.
