NOTES:
1. Double check type backflow prevention devices shall be required for any use where an intermediate (non-health) hazard exists, and shall be installed on all services to properties with auxiliary sources of water and other domestic services as determined by the City. (Title 17 Calif. Admin. Code).

2. Double check type backflow prevention devices shall be as listed by the Foundation for Cross-Connection Control and Hydraulic Research (USC Foundation), latest revision, and approved by the City.

3. Backflow prevention devices shall be installed adjacent to and on the property side of sidewalk where applicable. The assembly shall be installed as close to the water meter location as practical and with adequate clearance and accessibility for testing and maintenance. Assemblies may be installed vertically as approved by the City.

4. Device to be same size or larger than service meter.

5. Landscaping or other screening around the backflow device shall be as shown on approved plans.

6. Above ground piping, (except valve) shall be insulated, (wrapped) to prevent freezing.
